

Old Skool Cycle Werks' Henry T. Chriss Has A Winning Design in the PhatBack RTB™

Old Skool Cycle Werks (OSCW) designs functional and versatile aftermarket motorcycle accessories. OSCW takes great pride in designing and developing the most innovative and aesthetically pleasing aftermarket accessories on the market. Timeless design, quality craftsmanship, and innovative function.

OSCW's do-it-yourself concept, allows you to easily transform your stock bike into three distinctive custom styles: Street Cruiser, Bagger or a Full Dresser. All with one bike and no frame modification. An affordable option to customize your bike without paying a custom builder.

The PhatBack™ and other OSCW aftermarket motorcycle accessories were originally designed for the Harley-Davidson Touring models by Henry T. Chriss, owner of Henry Thomas Designs, LLC.

The first customer to purchase the PhatBack RTB™ (rumble trunk, bags) body kit, Jose Marrero from Oveido, FL, had dramatic results. Here's how his ride looks:

The flagship product, PhatBack™, is a one-piece, hand-laid fiberglass conversion kit. A Street Cruiser designed to resemble the classic American cars from the 1940s and 1950s. Cars that had a streamlined, smooth and fluid look with fender skirts and integrated running boards.

The PhatBack RTB™ takes this a couple steps further with the addition of a rumble trunk, an integrated storage compartment that opens like a rumble seat in the classic American cars, and top-opening hard bags providing almost 5 cu ft of total storage.

All Old Skool Cycle Werks products are made in America and offered solely by Old Skool Cycle Werks and its authorized dealers. Once you visit their website, www.oldschoolcyclewerks.com, bookmark it and check back often for product information and future innovative product launches such as future PhatBack kits for other HD models, Honda, Suzuki Yamaha and other metric bikes.
